In re Patent Application of:
Peter A. Yared, et al.

Conf. No.: 1021

Application No.: 10/046,117

Art Unit: 2141

Filed: January 11, 2002

Examiner: B. TIV

For: DYNAMIC CASTING OF OBJECTS WHILE
TRANSPORTING

Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450**DECLARATION PURSUANT TO 37 CFR §1.131**

In connection with the Applicant's Response to the Office Action issued on February 2, 2006, this declaration sets forth the pertinent facts proving conception of the claimed invention prior to October 2000.

1. We, Peter A. Yared, Bruce K. Daniels, Robert N. Goldberg, Yury Kamen, and Syed M. Ali, are the listed inventors for U.S. Patent Application 10/046,117 entitled "DYNAMIC CASTING OF OBJECTS WHILE TRANSPORTING"
2. We, Peter A. Yared, Bruce K. Daniels, Robert N. Goldberg, Yury Kamen, and Syed M. Ali, conceived the claimed invention prior to at least October, 2000, as evidenced by: (i) an Invention Disclosure e-mailed to us on May 3, 2001, in which we were listed as inventors and (ii) the printout of a web page entitled "Transport Packager" referenced by the invention disclosure (see Invention Disclosure, p. 3). The content

Application No.: 10/046,117

Docket No.: 16159/020001; P6415

of the web page created on or before October 10, 2000 as evidenced by the "Last Modified" information (*see* printout, p. 4) and the printout was generated on May 10, 2001 (*see* printout, p. 1). A copy of the invention disclosure is attached under Tab 1 and the print out entitled "Transport Packager" is attached under Tab 2.

3. We, Peter A. Yared, Bruce K. Daniels, Robert N. Goldberg, Yury Kamen, and Syed M. Ali, diligently worked on the reduction to practice of the invention from, at least, the date established by the web page (see attached) until, at least, the date of constructive reduction to practice established by the filing of U.S. Patent Application 10/046,117, filed on January 11, 2002. See attached correspondence and documentation and chronology of attorney time on the referenced application during preparation of the referenced application Tabs 3 and 4.

Application No.: 10/046,117

Docket No.: 16159/020001; P6415

We, Peter A. Yared, Bruce K. Daniels, Robert N. Goldberg, Yury Kamen, and Syed M. Ali, hereby declare that all statements made herein of our own knowledge are true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Signed this day 26, of 2006.

Peter,

Here's a copy of your disclosure with the Sun reference number assigned to it (P6415). Please use this reference number when referring to this matter in the future. Should you have questions regarding the status of this disclosure, please contact your Managing Sun Attorney (listed below). Questions regarding any patent incentive payments should be directed to Kristine Bombaci, Incentive Program Specialist, x60821. Thank you again for submitting this disclosure!

Kristine:

Approved for bonus?
\$120 each.

- 1) PETER YARED (EIN: 81072)
- 2) BRUCE DANIELS (EIN: 4278)
- 3) ROBERT GOLDBERG (EIN: 28416)
- 4) YURY KAMEN (EIN: 22083)
- 5) SYED ALI (EIN: 89472)

Note to the inventor(s): If approved, the incentive transaction will be processed two weeks from today. This means that your incentive payment may not show up until the pay period after the processing date.

YARED, PETER

4. WRITTEN DESCRIPTION

The invention is described as follows:

The Transport Packager enables a programmer to specify what classes to cast into different classes. There are numerous methods supplied to enable the casting, including explicitly specifying class names, adding a suffix by a class' superclass, and searching and replacing within the text of the class' name. The Transport Packager uses the casting guidelines provided to automatically cast an object into a new class. The Transport Packager can then recreate the original object as an object of a new class. A complete description and full documentation is available at:
<http://sunlabs.eng/projects/ace/Milestone2/TransportPackager/TransportPackager.html>

**P6415 - Invention Disclosure - Yared**

Tab 2

TransportPackager

Page 1 of 4

TransportPackager

The Ace TransportPackager provides maximum flexibility for client/server data movement.

Problem Statement

In Java-based distributed computing environments, it is extremely difficult to send a graph of complex, arbitrary objects between address spaces and retain the sharing of the instances through the graph. RMI requires that the objects are serializable and IIOP requires that the objects be composed of simple IDL types.

Solution

The TransportPackager converts a graph of complex, arbitrary objects into a single object that can be transported using existing protocols such as RMI and IIOP or stored and retrieved from disk.

TransportPackager Features and Benefits

Feature	Benefit
Packages an Object Graph for Transport	Packaged object can be sent over simple wire protocols such as RMI and IIOP, or simply stored to disk.
Multiple Object Access Options	Uses either Java reflection or JavaBean introspection and works with most Java classes, included Enterprise JavaBeans.
Preserves Instance Sharing	Complex object graphs are preserved, and duplicate instances are only packaged once for transport.
Completely Orthogonal	Classes do not need to implement any interfaces in order to work with the TransportPackager.

TransportPackager

Page 2 of 4

Allows Object to be Trimmed	Specific members of the object graph may be specified for transport & all others are ignored.
Extensive Class Casting	Instances can automatically be converted into similar classes with similar members.
Multiple Implementations	HashtableTransportPackager and XMLTransportPackager are included in the package.
Extensible	An interface is provided to manage the introspection and recreation of objects if a particular application requires extensive control.

Packages an Object for Transport

The TransportPackager packages an object graph by converting each object in the object graph into a new object that is appropriate for transport. The TransportPackager has a very simple, easy to use interface and can quickly be integrated into an existing distributed computing application. Following is an example of the API in use:

```
// Code on machine 1
Object o = new MyComplexObject();
TransportPackager transportPackager = new HashtableTransportPackager();
Object o2 = transportPackager.flatten(o);

// Code on machine 2
Object o = new ObjectReceivedFromTransport();
TransportPackager transportPackager = new HashtableTransportPackager();
Object o2 = transportPackager.expand(o);
```

Multiple Object Access Options

The TransportPackager can use either Java language reflection or JavaBeans introspection to read and write object members. Reflection is recommended for most cases, as it is more efficient. However, reflection does not work with certain objects, such as Enterprise JavaBeans. For such cases, introspection is recommended.

In order to be recreated by the TransportPackager, objects must have a default constructor and be instantiable without any parameters. When using reflection, all members (including protected and private members) that are non-transient are persisted. When using introspection, all JavaBean properties are persisted.

TransportPackager

Page 3 of 4

Preserves Instance Sharing

The TransportPackager preserves complex object graphs in which the same instance appears multiple times. In addition, such duplicate instances are only packaged once for transport, reducing transport size.

Completely Orthogonal

The TransportPackager is completely orthogonal & classes do not need to implement any interfaces in order to work with the TransportPackager. The TransportPackager breaks instances down into fundamental Java types using either Java reflection or JavaBean introspection, and therefore does not require that classes implement *Serializable*, as most Java transports require.

Allows Object to be Trimmed

The TransportPackager allows the developer to specify paths into the object graph such that only relevant members are packaged for transport. For example, in a graph that contains an Employee instance that has numerous members, and only the first and last name are actually required for transport, the following usage may be specified:

```
lastName  
firstName
```

If the employee's manager's last name is required as well, the usage may be nested:

```
lastName  
firstName  
manager.lastName
```

The ability to trim objects is very useful when only subsets of an object graph are required on the client.

Extensive Class Casting

With its extensive class casting features, the TransportPackager enables instances to be automatically converted into similar classes with similar members. This is particularly useful when transporting objects between a client and a server where the implementations are in fact completely different but the objects share a common interface or simply share common members.

The TransportPackager supports three methods of casting classes:

Method	Description	Example
Mapping	Maps a specifically named class to another specifically named class	Employee -> MyEmployeeBean
Suffix	Adds a suffix to a class name for instances of a superclass	Employee -> EmployeeProxy

TransportPackager

Page 4 of 4

Parser	Performs a search and replace to a class name for instances of a superclass	EmployeeBean -> EmployeeProxy
--------	---	-------------------------------

If the above three methods are not sufficient, the developer may hook into the TransportPackager to specifically provide a target class name for a particular class (see Extensible below).

Multiple Implementations

TransportPackager is in fact an interface, and the TransportPackager package includes two implementations of that interface: HashtableTransportPackager and XMLTransportPackager.

The HashtableTransportPackager converts objects into a subclass of java.util.Hashtable to store instance members. All properties are reduced to fundamental types by following the object tree and converting each instance into a hashtable. The resulting tree of Hashtables can be serialized, even if the original objects did not implement serializable.

The XMLTransportPackager is provided to support interoperability with non-Java platforms. It creates a very clean XML that uses the original objects' class and member names. An "id" attribute insures that duplicate instance references are not written multiple times into the XML file.

Extensible

An interface is provided to manage the introspection and recreation of objects if a particular application requires extensive control. Implementations of the interface can control how an object is introspected, recreated, and cast.

Code Documentation

For more specifics about the code, please examine the [TransportPackager's JavaDoc information](#).

Re: New U.S. Patent Application Entitled
"Dynamic Casting of Objects While Transporting"
Inventors: Peter A. Yared et al.
Our File: 16159.020001
Your Reference: P6415

Dear Sean:

We confirm filing of the referenced Utility Application and Assignment with the U.S. Patent and Trademark Office on January 11, 2002, and enclose copies for your records.

Please note that we have one year from the filing date, namely, January 11, 2003, in which to file foreign applications claiming priority of the U.S. patent application. We will keep this date in our docketing system and will remind you of the deadline as the date draws closer.

Currently, we expect this application will be set for publication by the U.S. Patent Office around July 11, 2003. Please note that upon publication, it will be possible for third parties to view the above application. It is also possible for third parties to submit information to be considered by the examiner in your patent application. However, it is not possible for third parties to oppose your application before issuance without your express consent. If you would like further information regarding this process, please contact us.

In addition, we take this opportunity to remind you of the duty of candor under 37 CFR § 1.56. If you or the applicant should become aware of any information material to the examination of this application, kindly provide it to us as soon as possible so that it may be submitted to the Patent and Trademark Office in an Information Disclosure Statement.

ROSENTHAL & OSHA L.L.P.

Mr. Sean Lewis
January 11, 2002

Re: New Patent Application entitled: Dynamic Casting of Objects While Transporting
Inventors: Peter Yared, Bruce Daniels, Robert Goldberg, Yury Kamen, and Syed Ali
Sun File No.: P6415
Business Line: SL/CA - ACE

Dear Jon:

Enclosed is the above-identified invention disclosure. Sun has selected you for the preparation of this patent application based on our understanding that you will personally write or supervise the application. *Please note that this is an urgent filing request. Please file this application no later than MAY 30, 2001.*

As counsel on behalf of Sun, it is your responsibility to (1) work directly with the inventor(s) in preparing the application; (2) determine all relevant events regarding any potential U.S. or international patent bar dates; and (3) obtain the necessary signatures and file the application in a timely manner to preserve both U.S. and international patent rights. Please contact me immediately in the event of any problems. The Sun technical/primary inventor contact for this case is Peter Yared, who can be reached at peter.yared@sun.com, 650.336.2728.

With regard to this application, please note the following:

1. Please notify me when you have set a date and location for your first disclosure meeting with the inventor.
2. Please send me a copy of the first draft of the application when it is sent to the inventor for review.
3. Please also provide me with a copy of the final draft application, in time for me to review and provide comments prior to filing the application.
4. When preparing the Power of Attorney form, please add the following attorneys:

Jonathan Osha, Esq.
Rosenthal & Osha I.L.P.

5. When you have received my approval of the final draft, please have the inventors execute the formal papers and file it. Please also notify me by e-mail at sean.lewis@sun.com of the date filed.
6. Per Sun procedures, please permit publication of this case in the United States unless contrary instructions are given.
7. As per our current billing agreement, this application is to be billed at actual cost up to a cap of \$7,200.00. Please call me at 510.869.2064 if you have any questions about this.

If you have any questions or comments regarding this matter, please do not hesitate to call.

Sincerely,

Sean P. Lewis, Esq.
Sr. Patent Counsel
